

HANIF AHMAD RIZQULLAH

FullStack Developer

Bandung, West Java, Indonesia | +62-812-2102-4958 | [Email](#) | [LinkedIn](#)

SUMMARY

Proficient in modern web development technologies, including Next.js, React, Express, Node.js, and PostgreSQL, with hands-on experience building dynamic projects such as event ticketing systems and company profile websites. Passionate about computer technology and committed to advancing skills in software development. Besides the hard skills that I mentioned, I have soft skills which can also help me reach out to others and work together. This is because of my experience in teaching.

WORK EXPERIENCE

Online Wordpress Tutorial

Mentor (Jan 2025 - now)

- Setup themes
- Setup plugin elementor
- Teach css fundamental

Ma'had Al-Ikhlas

Teacher (Jul 2023 - now)

- Teach students tarikh islam material
- Composed subject's material

PROJECT EXPERIENCE

- **Web Event Ticketing**

Selling tickets for an event is challenging due to the wide range of media platforms available for selling products. Tickets can be hard to sell as they compete with the other products. Our goal is to simplify the ticket-selling process by unifying the process in a single platform. We provide the platform that everyone can become an organizer, creating events, and selling tickets, making it easier for event seekers to buy the ticket on a single platform. As aggregators we connect sellers and buyers in an efficient way.

- **Web Company Profile**

Introducing a company can be challenging when it's not accessible. Our goal is to create a company profile in the form of a website. Website serves as a hub that provides an introduction of the company, review, track record, and the other essentials to enhance its recognition. With this company profile website, anyone can learn the company simply by visiting the website, making it easier to introduce the company to the world.

- **CMS Blogger**

Bringing ideas to life online has become common in this digital era, and everyone needs a platform to share them. Our goal is to develop a website that showcases people's ideas in the form of a blog. The content is input into a CMS, allowing us as developers to fetch the API and structure the data for our blog. While the concept is simple, it enables ideas to reach a wider audience across the internet.
